1. Maintenance

1.1 General
Please follow the maintenance instructions.

1.2 Installation
Before installing the filter into the system, check that the operating pressure of the system does not exceed the permitted operating pressure of the filter. Refer to the type code label on the filter.

Filters must be flexibly mounted and not installed rigidly to the floor or used as a pipe support. When installing, ensure that system forces cannot be transferred to the filter. A filter with a stand may only be installed to the ground if there is no compensator, expansion loop or similar device installed in the line.

1.3 Commissioning
Check that the correct filter element is installed, replace cover plate and tighten cover plate screws alternately. Switch on the hydraulic system and vent filter.

1.4 Maintenance Tools

2. Element Replacement

2.1 Element Removal
1. Switch off hydraulic system.
2. Loosen vent screw to release pressure. Open oil drain plug and drain contaminated oil into a suitable container. The oil must not be put back into the system unless it is cleaned.
3. Loosen cover plate screws. Lift off cover plate and remove element holder.
4. Pull filter element out using handle. Examine element surface for dirt residues and larger particles since these can be an indication of damage to components.
5. Replace or clean filter elements (only W/HC and V elements can be cleaned).
6. Clean housing and cover plate.
7. Examine filter, especially sealing surfaces, for mechanical damage.
8. Check O-rings – and replace if necessary.

2.2 Element Installation
1. Lubricate the sealing surfaces on the filter housing and cover plate, as well as the O-ring, with clean operating fluid.
2. When installing a new filter element, check that the designation corresponds to that of the old element.
3. Place filter element carefully on to the element nozzle in the housing.
4. Insert element holder; re-position cover plate and screw in cover plate bolts by hand. Tighten alternately (see TORQUE VALUES).
5. Screw in oil drain plug.
6. Switch on hydraulic system and vent filter at a suitable point in the system.
7. Close vent plug and check filter for leaks.

NOTE:
Filter elements which cannot be cleaned must be disposed of in accordance with environmental protection regulations.
## FILTER MAINTENANCE

### 3. Spare Parts

Other spare parts on request

-O-Ring durometer can range from 70-80Sh. EPR Seal Kits available on request.

-Lid assembly kits on request - kits include complete lid with seals, vent plug (if present). Bolts not included.
4. Replacement Element Model Code

Size
0850, 1300, 1700, 2600

Filtration Rating (micron)
1, 3, 5, 10, 15, 20 = ON
3, 5, 10, 20 = ECON2
25, 74, 149, = W/HC

Element Media
ON, BN4AM, ECON2, AM, W/HC, P/HC

Seals
(omit) = Nitrile rubber (NBR) (standard)
V = Fluorocarbon elastomer (FKM)

Bypass Valve
(omit) = 43 psid (3 bar) (standard)
B1 = 14.5 psid (1 bar)
B6 = 87 psid (6 bar)
KB = No Bypass

Supplementary Details
W = Indicator with brass piston (for water base fluids)
SO263 = Modification of elements for Skydrol or HYJET phosphate ester fluids
SFREE = Element specially designed to minimize electrostatic charge generation

5. Clogging Indicator Model Code

Indicator Prefix
VM = G 1/2 3000 psi

Trip Pressure
2 = 29 psid (2 bar) (standard)
5 = 72 psid (5 bar) (optional)

Type of Indicator
A = No indicator, plugged port
B = Pop-up indicator (auto reset)
BM = Pop-up indicator (manual reset)
C = electric switch - SPDT
D = electric switch & LED light – SPDT

Modification Number

Supplementary Details
Seals
(omit) = Nitrile (NBR) (standard)
V = Fluorocarbon elastomer (FKM)

Light Voltage (D type indicators only)
L24 = 24V
L110 = 110V

Thermal Lockout (VM, VD types C, D, J, and J4 only)
T100 = Lockout below 100°F

Underwriters Approval (VM, VD types C, D, J, and J4 only)
cRUus = Electrical indicator with underwriter’s approval

(For additional details and options, see Section G - Clogging Indicators of the HYDAC Filter catalog.)

Model Codes Containing RED are non-stock items — Minimum quantities may apply – Contact HYDAC for information and availability
6. Maintenance Instructions

6.1 User Instructions for Filters

- This pressure equipment must only be put into operation in conjunction with a machine or system.
- The pressure equipment must only be used as stipulated in the operating instructions of the machine or system.
- This pressure equipment must only be operated using hydraulic or lubricating fluid.
- It is the responsibility of the operator to comply with the water regulations of the country concerned.

**CAUTION**
- The user must take appropriate action (e.g. venting) to prevent the formation of air pockets.
- Repairs, maintenance work and commissioning must only be carried out by trained personnel.
- Allow the pressure equipment to cool before handling.
- The stipulations of the operating instructions of the machine or the system must be followed.
- Statutory accident prevention regulations, safety regulations and safety data sheets for fluids must be observed.
- Filter housing must be grounded.
- The information in this brochure relates to the operating conditions and applications described.
- Customer Information in respect of Machinery Directive 2006/42/EC
Hydraulic filters are defined as fluid power parts / components and are therefore excluded from the scope of the Machinery Directive, sections 1.4.1 - 1.4.3. They do not bear the CE mark.
- This symbol is followed by user tips and particularly useful information.

**DANGER!**
- Caution: pressure equipment! Before any work is carried out on the pressure equipment, ensure the pressure chamber concerned (filter housing) is depressurized.
- On no account must any modifications (welding, drilling, opening by force...) be carried out on the pressure equipment.
- When using electrical clogging indicators, the electrical power supply to the system must be switched off before removing the clogging indicator connector.

6.2 Maintenance, General
This section describes maintenance work which must be carried out periodically. The operational safety and life expectancy of the filter, and whether it is ready for use, depend to a large extent on regular and careful maintenance.

6.3 Maintenance Measures
- Spare parts must fulfil the technical requirements specified by the manufacturer.
- Keep tools, working area and equipment clean.
- After disassembling the filter, clean all parts, check for damage or wear and replace parts if necessary.
- When changing a filter element, a high level of cleanliness must be observed.

6.4 Interval Between Element Changes
In principle we recommend that the filter element is changed every 6 months or upon indication, whichever occurs first.
We recommend installing the filter with a clogging indicator (visual and/or electrical or electronic) to monitor the filter element.
If the clogging indicator responds, it is necessary to change or clean the filter element without delay (only W and V elements can be cleaned).
When no clogging indicator has been installed, we recommend changing the elements at specific intervals. (The frequency of changing the filter elements depends on the filter design and the conditions under which the filter is operated). When filter elements are subject to high dynamic loading it may prove necessary to change them more frequently. The same applies when the hydraulic system is commissioned, repaired or when the oil is changed.
The standard clogging indicators only respond when fluid is flowing through the filter. With electrical indicators the signal can also be converted into a continuous display on the control panel. In this case the continuous display must be switched off during a cold start or after changing the element.
If the clogging indicator responds during a cold start only, it is possible that the element does not yet need to be changed.

**Customer Information in respect of Machinery Directive 2006/42/EC**
Hydraulic filters are defined as fluid power parts / components and are therefore excluded from the scope of the Machinery Directive, sections 1.4.1 - 1.4.3. They do not bear the CE mark.
Before using these components, ensure compliance with the specifications provided by HYDAC Technology Corporation. The specifications also contain information on the relevant essential health and safety requirements (based on Machinery Directive 2006/42/EC).
We hereby declare that the filters are intended to be incorporated into machinery within the terms of the Directive 2006/42/EC.
It is prohibited to put the filters into service until the machinery as a whole is in conformity with the provisions of the Machinery Directive.
