Filters

SF/SFM/SFF Series
Service and Parts

up to 132 gpm (500 l/min)

1. Maintenance

1.1 General
Please follow the maintenance instructions.

1.2 Installation
Before installing the filter into the system, check that the operating pressure of the system does not exceed the permitted operating pressure of the filter. Refer to the type code label on the filter.

1.3 Commissioning
Check that the correct filter element is installed, replace cover plate and tighten cover plate screws alternately. Switch on the hydraulic system and check filter for leakage. Vent filter at an appropriate point in the system.

2. Element Replacement

2.1 Element Removal
1. Switch off hydraulic system and release filter pressure.
   Caution: when installed inline before opening the filter, slowly open the vent screw and release pressure (release pressure in the tank, if any).
2. Size 60-330:
   Loosen cover plate bolts and lift off the cover plate.
   Size SFM 330:
   Loosen cover plate bolts and lift off the cover plate.
   Size SFF 400 - 500:
   Unscrew cover plate bolts.
3. Lift out filter element. Examine element surface for dirt residues and larger particles since these can be an indication of damage to components.
4. Replace or clean filter element(s) (only W/HC and V elements can be cleaned).
5. Clean housing, cover plate.
6. Examine filter, especially sealing surfaces, for mechanical damage.
7. Check O-rings – and replace if necessary.

2.2 Element Installation
1. Lubricate the sealing surfaces on the filter housing and cover plate, as well as the O-ring, with clean operating fluid.
2. When installing a new filter element, check that the designation corresponds to that of the old element.
3. Place filter element(s) carefully on to the element nozzle in the housing.
4. Size SF 60 - 330, SFM 330:
   Replace cover plate and screw in cover plate bolts by hand; then tighten bolts alternately.
   Size SFF 400 - 500:
   Replace cover plate and screw in manually.
5. Switch on hydraulic system
6. Check filter for leakage.
7. Vent filter at a suitable point in the system.

NOTE:
Contamination or incomplete pressure release on disassembly can lead to seizing of the bowl thread.
Filter elements which cannot be cleaned must be disposed of in accordance with environmental protection regulations.
3. Spare Parts

Other spare parts on request:
- O-Ring durometer can range from 70-80Sh. Seal material is nitrile rubber (NBR). EPR Seal Kits available on request.
- Lid assembly kits on request - kits include complete lid with seals.
- Bolts not included.
FILTER MAINTENANCE

4. Replacement Element Model Code

Size
0110, 0240, 0330, 0950, 1300

Filtration Rating (micron)
25, 74, 149 = W/HC

Element Media
W/HC

Seals
(omit) = standard
V = Fluorocarbon elastomer (FKM)
EPR = Ethylene propylene rubber (EPR)

Bypass Valve
B0.2 = 3 psid (0.2 bar) sizes 60, 950, 1300
B0.3 = 4.4 psid (0.3 bar) sizes 110, 160, 240, 330

Supplementary Details
SO263 = Modification of elements for Skydrol or HYJET phosphate ester fluids
SFREE = Element specially designed to minimize electrostatic charge generation

5. Clogging Indicator Model Code

Indicator Prefix
VR = Return Filters

Trip Pressure
0.2 = 3 psid (0.2 bar)

Type of Indicator
A = No indicator, plugged port
UE = Vacuum gauge
UF = Vacuum switch

Modification Number

Supplementary Details
Seals
(omit) = Nitrile rubber (NBR) (standard)
V = Fluorocarbon elastomer (FKM)
EPR = Ethylene propylene rubber (EPR)

(For additional details and options, see Section G - Clogging Indicators of the HYDAC Filter catalog.)
6. Maintenance Instructions

6.1 User Instructions for Filters

This pressure equipment must only be put into operation in conjunction with a machine or system.
- The pressure equipment must only be used as stipulated in the operating instructions of the machine or system.
- This pressure equipment must only be operated using hydraulic or lubricating fluid.
- It is the responsibility of the operator to comply with the water regulations of the country concerned.

This symbol denotes safety precautions, the non-observance of which can endanger persons and the environment.

CAUTION
- The user must take appropriate action (e.g. venting) to prevent the formation of air pockets.
- Repairs, maintenance work and commissioning must only be carried out by trained personnel.
- Allow the pressure equipment to cool before handling.
- The stipulations of the operating instructions of the machine or the system must be followed.
- Statutory accident prevention regulations, safety regulations and safety data sheets for fluids must be observed.
- Filter housing must be grounded.
- When working on, or in the vicinity of, hydraulic systems, open flames, sparks and smoking are forbidden.
- Hydraulic oils and water-polluting fluids must not be allowed to enter the soil or watercourses or sewer systems. Please ensure safe and environmentally friendly disposal of hydraulic oils. The relevant regulations in the country concerned with regard to ground water pollution, used oil and waste must be complied with.
- Whenever work is carried out on the filter, be prepared for hot oil to escape which can cause injury or scalding as a result of its high pressure or temperature.

DANGER!
- Caution: pressure equipment! Before any work is carried out on the pressure equipment, ensure the pressure chamber concerned (filter housing) is depressurized.
- On no account must any modifications (welding, drilling, opening by force...) be carried out on the pressure equipment.
- When using electrical clogging indicators, the electrical power supply to the system must be switched off before removing the clogging indicator connector.

6.2 Maintenance, General

This section describes maintenance work which must be carried out periodically. The operational safety and life expectancy of the filter, and whether it is ready for use, depend to a large extent on regular and careful maintenance.

6.3 Maintenance Measures
- Spare parts must fulfil the technical requirements specified by the manufacturer.
- Keep tools, working area and equipment clean.
- After disassembling the filter, clean all parts, check for damage or wear and replace parts if necessary.
- When changing a filter element, a high level of cleanliness must be observed.

6.4 Interval Between Element Changes

In principle we recommend that the filter element is changed every 6 months or upon indication, whichever occurs first.

We recommend installing the filter with a clogging indicator (visual and/or electrical or electronic) to monitor the filter element.

If the clogging indicator responds, it is necessary to change or clean the filter element without delay (only W and V elements can be cleaned).

When no clogging indicator has been installed, we recommend changing the elements at specific intervals. (The frequency of changing the filter elements depends on the filter design and the conditions under which the filter is operated). When filter elements are subject to high dynamic loading it may prove necessary to change them more frequently. The same applies when the hydraulic system is commissioned, repaired or when the oil is changed.

The standard clogging indicators only respond when fluid is flowing through the filter. With electrical indicators the signal can also be converted into a continuous display on the control panel. In this case the continuous display must be switched off during a cold start or after changing the element.

If the clogging indicator responds during a cold start only, it is possible that the element does not yet need to be changed.

Customer Information in respect of Machinery Directive 2006/42/EC

Hydraulic filters are defined as fluid power parts / components and are therefore excluded from the scope of the Machinery Directive, sections 1.4.1 - 1.4.3. They do not bear the CE mark.

Before using these components, ensure compliance with the specifications provided by HYDAC Technology Corporation. The specifications also contain information on the relevant essential health and safety requirements (based on Machinery Directive 2006/42/EC).

We hereby declare that the filters are intended to be incorporated into machinery within the terms of the Directive 2006/42/EC. It is prohibited to put the filters into service until the machinery as a whole is in conformity with the provisions of the Machinery Directive.
